Appl. No. 10/667,958 Atty. Docket No. CM2632MC Amdt. dated 06/14/2005 Reply to Office Action of 12/14/2004 Customer No. 27752

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

- (Currently Amended) A composition suitable for treating hair comprising:
 - a) an oxidizing agent; and
 - b) a chelant (L) having a $\frac{\log K_{CuL}}{\log K_{CaL}}$ ratio calculated at pH 10 of at least

about 3.20;

wherein $\log K_{CuL}$ is the common logarithm of the Conditional Stability Constant of said chelant with Cu^{2+} and $\log K_{CaL}$ is the common logarithm of the Conditional Stability Constant of said chelant with Ca^{2+} ;

wherein said composition has a pH from about 9.5 to about 11; and wherein said composition is substantially free of organic peroxyacid precursors and preformed organic peroxyacids.

- (Previously Presented) A composition according to claim 1, wherein said chelant
 has a Hydrogen Peroxide Decomposition Ratio (% Loss) of less than about 3.5%
 as measured by the Hydrogen Peroxide Decomposition Ratio Measurement
 Protocol.
- (Original) A composition according to claim 1, wherein said chelant forms a
 hexadendate complex with Cu²⁺.
- 4. (Canceled)
- (Original) A composition according to claim 1, wherein said composition is in the form of an oil-in-water emulsion.
- 6. (Original) A composition according to claim 1, wherein said composition is in the form of a thickened aqueous solution.

Appl. No. 10/667.958 Atty. Docket No. CM2632MC Amdt. dated 06/14/2005 Reply to Office Action of 12/14/2004 Customer No. 27752

- 7. (Original) A composition according to claim 1, wherein said oxidizing agent is present at a level of from about 0.1% to about 40% by weight of said composition and is selected from water-soluble oxidizing agents and mixtures thereof.
- (Original) A composition according to claim 7, wherein said oxidizing agent comprises hydrogen peroxide.
- (Original) A composition according to claim 1, wherein said chelant is present at a level of from about 0.01% to about 10% by weight of said composition.
- 10. (Original) A composition according to claim 1, further comprising at least one oxidative hair dye precursor.
- 11. (Currently Amended) A method of treating hair, said method comprising the steps of:
 - i) contacting hair with a first composition comprising a chelant (L) having
 - a log KCuL ratio calculated at pH 10 of at least about 3.20; and log KCaL
 - ii) contacting hair with a second composition comprising an oxidizing agent immediately after step i);

wherein log K_{CuL} is the common logarithm of the Conditional Stability Constant of said chelant with Cu²⁺ and log K_{CaL} is the common logarithm of the Conditional Stability Constant of said chelant with Ca²⁺; and wherein said second composition has a pH from about 9.5 to about 11; and wherein said second composition is substantially free of organic peroxyacid precursors and preformed organic peroxyacids.

- 12. (Currently Amended) A method of treating hair, said method comprising the steps of:
 - i) contacting hair with a first composition comprising an oxidizing agent;

Appl. No. 10/667,958 Atty. Docket No. CM2632MC Amdt. dated 06/14/2005 Reply to Office Action of 12/14/2004 Customer No. 27752

- ii) contacting hair with a second composition comprising a chelant having
- a log K_{CuL} ratio calculated at pH 10 of at least about 3.20; and
- iii) contacting hair with a third composition comprising a second oxidizing agent;

wherein steps i) and iii) are separated by at least 1 day and step ii) does not take place immediately before step iii);

wherein log K_{CuL} is the common logarithm of the Conditional Stability Constant of said chelant with Cu^{2+} and log K_{CaL} is the common logarithm of the Conditional Stability Constant of said chelant with Ca^{2+} ; and

wherein said first and third compositions have a pH from about 9.5 to about 11; and

wherein said first and third compositions are substantially free of organic peroxyacid precursors and preformed organic peroxyacids.

- 13. (Original) A kit for dyeing hair comprising a first and a second compositions packaged in different containers, wherein said first composition comprises an oxidizing agent and said second composition comprises an oxidative dye precursor, wherein the resulting mixture of said first and second compositions is a composition according to claim 10.
- 14. (Original) A method of dyeing human hair, said method comprising the steps of:
 - i) mixing the first and second composition of a kit according to claim 13;
 - ii) contacting hair with the mixture obtained on step i);
 - iii) massaging said mixture into hair;
 - iv) retaining said mixture on the hair for an amount of time sufficient for mixture to dye the hair;
 - iv) rinsing off said composition with water.
